Bangalore, Karnataka, 560023, India

Professional Summary

Analytical mindset for data driven decision making as a developer. Effective communicator fostering positive work environment. I possess a solid understanding of data structures and Python. I have worked on AI/ML and full stack projects and have experience of project management. Eager to contribute enthusiasm, adaptability, and a fresh perspective to a dynamic team.

Education

- **PES College** *Aug 2025*
  Masters in Computer Application (MCA) Bangalore, India
  - CGPA: 6.44/10.00
- **Dayananada Sagar College of Arts, Science and Commerce** *Sep 2022*
  Batchelors in Computer Application (BCA) Bangalore, India
  - CGPA: 7.68/10.00

Experience

- **BLP Industry-ai [🌐]** *Sep 2025 – Jan 2026*
  AI/ML Intern Bangalore, India
  - Gained practical experience on Django by creating learning pipeline with MongoDB under a supervised learning model that automatically takes new data, preprocessed it, and retrains the model without any human intervention. Implemented the complete workflow on the Docker platform to provide stability and collaboration.
  - Strengthened core machine learning and deep learning knowledge, covering ANN, CNN, RNN, and end-to-end model development workflows used in real-world projects.
  - Provided support to computer vision activities by developing Regions of Interest (ROI) with the help of bounding-box annotation and specific validation to provide proper accuracy in identified images.
  - Designed a secure data reconciliation workflow to merge camera configuration records from JSON and Excel sources using IP address as the unique identifier, safely injecting encoded credentials without overwriting existing production passwords.

Projects

- **CricketVerse [🌐]** *Nov 2024 – Jun 2025*
  Tools: [React.js, HTML, CSS, Node.js, Express.js, MongoDB, FLASK, Web scraping, Machine Learning] [GitHub]
  - Developed a full-stack cricket analytics platform (CricketVerse) to deliver live match insights and user-friendly interaction.
  - Implemented ensemble-based win-probability prediction through Flask model integration, improving accuracy of second-inning outcome prediction.
  - Created a real-time data pipeline using web scraping and APIs, ensuring continuous updates and fault-tolerant storage with MongoDB.
  - Applied machine learning and statistical methods to analyze match dynamics, run progression, and in-game performance trends.
- **Snake Game** *Apr 2024 – Oct 2024*
  Tools: [HTML, CSS, Angular, typescript, Data structures, MongoDB] [GitHub]
  - Created a Snake game in a browser with the help of Angular and TypeScript and made sure that the user interface and the gameplay were decoupled.
  - Introduced effective movement, collision detection and score updating real-time algorithms.
  - Eased a MongoDB-based back-end service on which to store player scores and game sessions.

Skills

- **Technical:** C, Python, JavaScript, Data Structures, React, Django, HTML, CSS, MongoDB, SQLite, SQL, DBMS, Docker, NLP, Data Analytics, Node, Express, AI/ML, Deep Learning, Neural Network, Computer Vision
- **Tools:** NumPy, Pandas, Scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn, Jupyter Notebook, Git, GitHub

Certifications

- **Introduction to Neural Network** *Nov 2025*
- **Introduction to Deep Learning with Keras** *Nov 2025*
- **Introduction to Python OpenCV** *Nov 2025*
- **Advance SQL** *Nov 2025*
